

SCREENS

BRUKS KLÖCKNER offers a variety of different kinds and sizes of screens and screening systems needed for most different applications, meeting the demands on capacity, quality of size sorting and reliability.

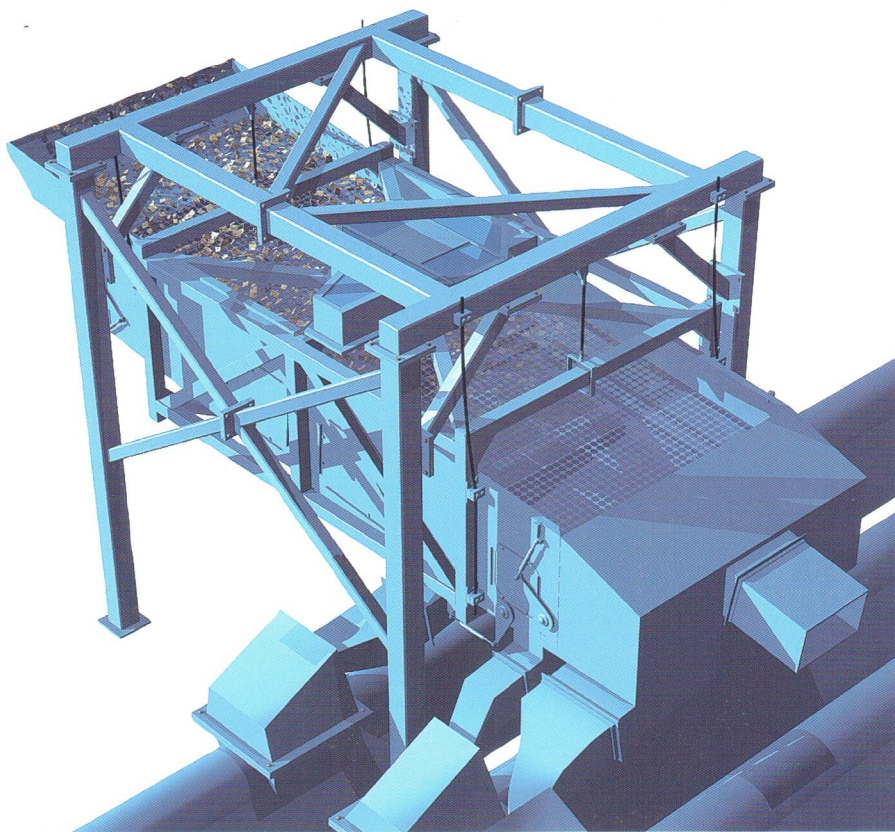

FREE-SWINGING SCREENS

Free-swinging screens have a suspended design and are available in several sizes for separating up to four fractions. Exchangeable screen decks with decreasing hole sizes ensure efficient screening and maximum economic yield from by-products.

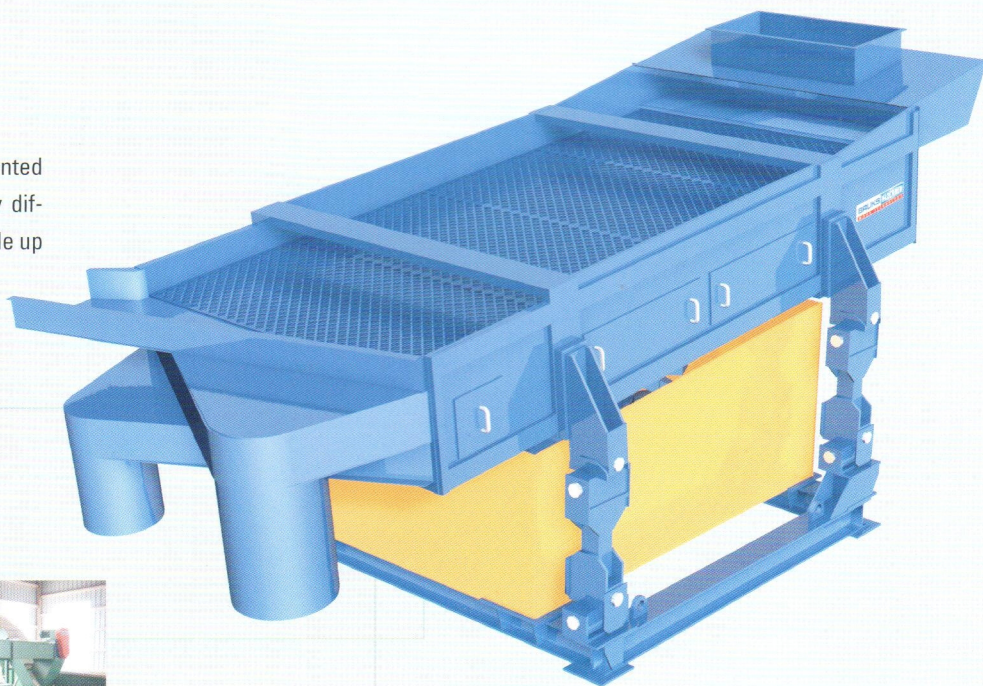

SH-11/4 features an ingenious control mechanism making it easy to vary the proportion of pin chips in the accept chips, or to discharge a separate fraction such as pin chips.

SH screens are available also in designs for screening of wood pellets.

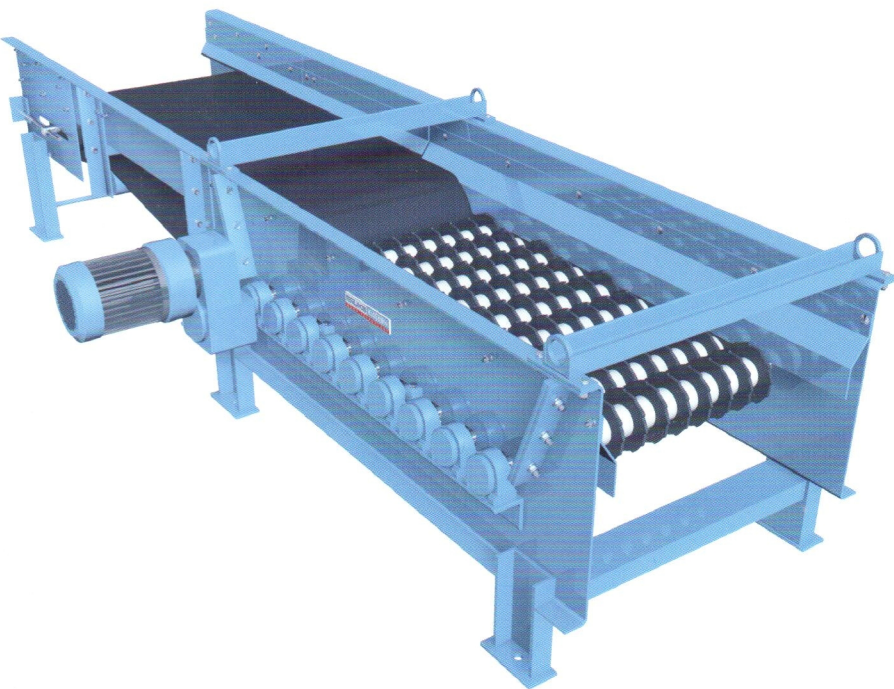

GYRATORY SCREENS

These screens are excenter-guided, floor-mounted versions, suitable for the separation of many different bulky materials. Some models can handle up to 6 fractions.

ON OF MANY DIFFERENT BULK MATERIALS:

- > Chips and sawdust
- > Bark and waste wood
- > Sawmill residue
- > Wet and dry flakes
- > Recycled materials

DISC SCREENS

BRUKS KLÖCKNER disc screens separate reliably over-sized material from accepted fractions in sawmill lines, log yards etc.

Product advantages:

- Maximum screening capacity with low space requirements
- Self-cleaning screen surface
- Low maintenance cost
- Easily exchangeable shafts and discs

Design and shaft/disc intervals depend on required screening fraction.

VIBRATORY SCREENS

BRUKS KLÖCKNER vibrating screens are designed for separation of several fractions.

These systems are virtually maintenance-free and need no supervision.
